The player also has preset video format profiles for a horde of different mobile devices such as Android devices and iPhones for you to choose from.. As good as VLC Media Player may be at converting videos from one format to the other, not many people know about this extremely useful little feature of VLC Media Player, and even less people know how to make appropriate use of it.

Alternatively, you can press Alt + O Click on Browse in the Destination section and browse to the directory where you want the converted video to be saved.. Once you are done fine-tuning the specifications that the converted vide file will have, click on Start to allow VLC Media Player to begin the conversion.. You can see the progress of the conversion in VLC Media Player's timeline

One of the most important things – other than playing videos – that VLC Media Player can be used for is converting videos from one video format to the other.. Open the dropdown menu at the bottom of the Open Media window and click on Convert.. The converted file will be saved to the directory that you specified in the Destination file The amount of time that the conversion will take will depend on the length of the video being converted, the specifications of your video format profile and the specifications of your computer. How to Convert Videos Using VLC Media Player  
As far as third-party media players for computers go, VLC Media Player is quite possibly the best and most commonly used one.. What makes VLC Media Player so great at being a video converter is the fact that it not only gets the job done but also supports the conversion of just as many video formats as it does playback.. Click on Add... in the File Selection section and then browse to and select the video file that you want to convert.
